1 Reference Manual

HiPE

Application

The normal way to native-compile an Erlang module using HiPE is to include the atom native in the Erlang compiler options, as in:

```
1>
```

Options to the HiPE compiler are then passed as follows:

```
1>
```

For on-line help in the Erlang shell, call `hipe:help()`. Details on HiPE compiler options are given by `hipe:help_options()`.
